

Make your life easier.

The wireless system presented by Teleco Automation is very simple to install and to use. You can switch devices ON and OFF, **open and close every electrical appliance**, inside and outside your home:

- rolling shutters
- gates
- blinds
- garage doors
- heating systems
- cooling systems

Everything is carried out using **wireless radio frequency**. You will be free to control any devices from anywhere in your home... if you don't like the position of a wall switch just change it to a location more convenient. **Without any construction works.**

Less wires, more value.

The true freedom of your home is represented by our Home Automation systems. **Without wires. Without expensive work. Without difficult installations.** Thanks to our wireless systems you will be free:

- to control via radio frequency all the electrical appliances of your home
- to send single and centralised commands from anywhere in your house
- to install all our devices without construction works

FOR THE WIRELESS CONTROL OF **THE MOTORIZED APPLIANCES**

What Teleco devices do you need to control your appliances?

The operating system is very easy to use: a command will be sent via radio frequency to the receiver by the wall remote control or the hand transmitter (so without any wire). The receiver will activate the opening and the closing of the garage doors, gates, blinds, etc.

The product range.

■ Mechanical push-buttons for rolling shutters

■ Wall transmitters powered by batteries

■ Hand transmitters powered by batteries

■ Wall transmitters powered by batteries

■ Keypad

■ RF control units for motors

■ Radio control units for blind motors

■ Radio control units for garage doors

■ Bi-directional radio safety system for garage doors (the spiral cable is not necessary)

It can be used with a photocell safety edge and/or a 8.2 kOhm safety edge for garage doors (for houses and for factories) and motor operated gates

■ Radio receivers for gates
